FOR IMMEDIATE RELEASE

**Second Rule LLC Announces Major Performance and Throughput Enhancements for its line of IP3 NetAccess VBN Gateways**

*Immediate, no cost feature availability of all-Gigabit Ethernet hardware and unprecedented performance and capacity of up to 600 Megabits per second and up to 15,000 users per device for its leading Visitor Based Network Gateway, the IP3 NetAccess.*

**PHILADELPHIA, PA, January 29, 2008** – Second Rule LLC today announces major performance and throughput enhancements for its IP3 NetAccess VBN (Visitor Based Network) gateways that includes standard Gigabit Ethernet connectivity with added throughput and capacity increases across the whole product line.

Available immediately, all new IP3 NetAccess VBN gateways shipped from the date of this announcement will automatically include this enhancement included at no extra charge. As well as all physical network connections being Gigabit capable 10/100/1000 connections to support the demands of networks of today and the future, Second Rule has conducted extensive performance testing using industry standard test equipment and procedures to benchmark the throughput of these enhancements and maximum user capacity of its products. The results show that the IP3 NetAccess now provides best in class capacities, offering actual throughput up to 600 Megabits per second on a single device and up to 15,000 users total user count.

“This enhancement is necessary to break away from the legacy limits of sub-100 Megabit performance that have been the standard for products in this class up to today” said Andrew Marshall, President and CEO of Second Rule LLC. “We discovered during research last year that 100-Megabit capped products would not be adequate for networks being planned today, and we

moved quickly to engineer a solution. Bring able to provide these enhancements to our customers at no extra cost is just one of the things that make the IP3 NetAccess the right choice for anyone needing to provide network access to others” He continued, “Our core strategy of using industry standard hardware and software platforms that started with the X-Series announcements in 2006 enables us to provide enormous capacity throughput improvements compared to previous units and to our competitors”

### **About IP3 Networks – a Trademark of Second Rule LLC**

Second Rule LLC, through its IP3 Networks Division is a leading provider of access control management products for broadband wireless and wired networks. IP3 Develops IP network solutions for use in networks that need to manage visitors (Visitor Based Networks, or VBN's) IP3's NetAccess family of access control, traffic management and billing gateways provides highly customizable provisioning, authentication, and network security services that enable hospitality properties, public venues, service providers, and enterprises to manage and control both public and private broadband services. With offices in Philadelphia, PA, and San Diego, CA Second Rule LLC is a privately held and financed corporation with many thousands of gateways installed with customers on five continents. For more information, visit <http://www.ip3.com>. To find out more about the benefits of IP3 NetAccess, contact the company at [sales@ip3.com](mailto:sales@ip3.com) or by calling 800-388-5262 toll-free inside the USA, or +1-858-876-0146 internationally.
